

Instructions for Connecting Xantrex Battery Monitors

Use this in place of what is in the Installation Instructions.

Normally the battery monitor comes with the supplied cable attached, but in case they are disconnected or shipped separately, this instruction sheet helps with reconnecting the cable and the Battery Monitor.

There are basically two models of the Xantrex Battery Monitor, the Link 10 and the XBM. Note that the cables for the two types are NOT interchangeable. If the XBM was ordered, the cable supplied cannot be used with a Link 10. The cable supplied with the XBM must not be trimmed in length because the cable end that connects to the monitor has been prepared specially. Please leave as it is supplied.

<u>Wire Color</u>	<u>Pin#</u>	<u>Link 10</u>	<u>XBM</u>
Grey	1	1. -DC	-
Green	3	2. +I	I+
Yellow	2	3. -I	I-
White	4	4. Batt Voltage	Va
Brown	5	5. +DC	+
